Building Evacuation Diagrams

Building Evacuation Diagrams are required to be posted at each exit stairway, elevator lobby and in areas where large numbers of people gather in hotel, health care and high-rise structures.

General Guidelines:

The diagram must show the basic layout of the building by floor level, including walls and doors.

It must be large enough to be seen clearly.

Items on the diagram should be color coded to make them easier to understand.

What Must Be Included:

A starting point with the words "YOU ARE HERE". This will vary by the diagrams location.

A simple compass point indicating "N" North.

Mark the egress paths that are available from the starting point. Highlight exterior or stair enclosure doors with the word "EXIT"

Show the location of fire extinguishers and manual fire alarm pull stations.

Additional Items To Be Considered:

The location of handi-capped accessible exits, first aid kits, external defibrillators (AED), eyewash stations.

Inclusion of braille code for any wording.
